

List of Figures, Tables and Equations

Sr. No.	Title	Page No.
1	Chapter 1. Introduction, Aims and Objectives	
Figure 1.1	Development of biosensors	2
Figure 1.2	Advantages of biosensor over conventional methods	3
Figure 1.3	Components of a typical biosensor	6
Figure 1.4	Flowchart showing the various types of biosensors based on their transducers and biological recognition elements	8
Figure 1.5	Schematic figure of biosensor interaction mechanisms: Catalytic vs. Non-Catalytic	9
Figure 1.6	An aptamer based electrochemical biosensor	14
Figure 1.7	Different types of biosensors based on bioreceptors	18
Figure 1.8	Schematic diagram of amperometric/voltametric, potentiometric & conductometric	22
Figure 1.9	Types of biosensors based on transducers	24
Figure 1.10	Applications of biosensor in different areas of specialization	29
Figure 1.11	Types of nanomaterial	36
Figure 1.12	Different types of coating based deposition methods for nanomaterials	38
Figure 1.13	Different types of direct deposition methods for nanomaterials	41
Figure 1.14	Methods of deposition of nanomaterials	46
Table 1.1	Advantages of biosensor over conventional techniques	5
Chapter 2. Novel Electrochemical biosensor based on immobilized fungal laccase for the detection of hydroquinone		
Figure 2.1	FE-SEM micrographs of SPE, SPE/MWCNTs, SPE/MWCNTs/GA/Laccase	58
Figure 2.2 (a)	Cyclic voltammetry scans of bare SPE & SPE/MWCNTs/GA/Laccase coated electrode in 50 mM phosphate buffer, pH 7 with 50mM K ₃ [Fe(CN) ₆] and 0.1 M KCl at 100 mV/s scan rate.	59

Figure 2.2 (b)	Cyclic voltammetry scans of SPE/MWCNTs/GA/Laccase coated electrode at different scan rates from 80 mV/s to 160 mV/s in 50 mM phosphate buffer, pH 7 with 50mM $K_3[Fe(CN)_6]$ and 0.1 M KCl.	60
Figure 2.2 (c)	Plots of the corresponding anodic and cathodic peak current vs. scan rates in 50 mM phosphate buffer, pH 7 with 50mM $K_3[Fe(CN)_6]$ and 0.1 M KCl at 100 mV/s scan rate.	60
Figure 2.3 (a)	Cyclic voltammetry scans of SPE/MWCNTs/GA/Laccase coated electrode as function of pH in 50 mM phosphate buffer, with 50mM $K_3[Fe(CN)_6]$ and 0.1 M KCl at 100 mV/s scan rate	61
Figure 2.3 (b)	Effect of pH on the current density of anodic and cathodic peaks of SPE/MWCNT/GA/Laccase electrode in in 50 mM phosphate buffer with 50mM $K_3[Fe(CN)_6]$ and 0.1 M KCl containing 1000 μ M hydroquinone at 100 mV/s scan rate.	62
Figure 2.4 (a)	Cathodic peak currents of SPE/MWCNTs/GA/Laccase electrode in triplicates in 50 mM PB (50mM $K_3[Fe(CN)_6]$, 0.1M KCl, pH 5.5) at 100 mV/s scan rate(n=3)	63
Figure 2.4 (b)	Storage stability of electrode monitored at 6 day intervals.	63
Figure 2.5	Calibration curve of the current vs the concentration of hydroquinone in 50 mM phosphate buffer, pH 5.5 with 50mM $K_3[Fe(CN)_6]$ and 0.1 M KCl at 100 mV/s scan rate.	64
Figure 2.6	Comparison of the response of SPE/MWCNTs/GA / in 50 mM phosphate buffer, pH 5.5 with 50mM $K_3[Fe(CN)_6]$ and 0.1 M KCl containing different interferent at 100 mV/s scan rate (n=3).	65
Table 2.1	Hydroquinone detection of real samples by SPE/MWCNT/GA/Laccase electrode.	66
Equation 2.1	Enzymatic action of Laccase	56
Equation 2.2	Electron release by 1, 4–benzoquinone	56

Chapter 3. Development of lactose biosensor with immobilized β -Galactosidase and Galactose Oxidase with Multi-Walled Carbon Nanotubes and CuO-TiO₂

Figure 3.1 (a)	Cyclic voltammetry scans of bare SPE, SPE/MWCNTs, SPE/MWCNTs/CuO-TiO ₂ and SPE/MWCNTs/CuO-TiO ₂ /GA/ β -gal-GaOx electrode in 50 mM phosphate buffer, pH 7 with 50mM K ₃ [Fe(CN) ₆] and 0.1 M KCl at 100 mV/s scan rate.	72
Figure 3.1 (b)	Cyclic voltammetry scans of electrode (SPE/MWCNTs/CuO-TiO ₂ /GA/ β -gal-GaOx) at different scan rate ranging from 25 mV/s to 250 mV/s in 50 mM phosphate buffer, pH 7 with 50mM K ₃ [Fe(CN) ₆] and 0.1 M KCl at 100 mV/s scan rate.	73
Figure 3.1 (c)	Plots of corresponding anodic and cathodic peak of current vs scan rate.	73
Figure 3.2	Cathodic peak currents of lactose chip in 50 mM phosphate buffer, pH 7 with 50mM K ₃ [Fe(CN) ₆] and 0.1 M KCl at 100 mV/s scan rate.	74
Figure 3.3 (a)	Cyclic voltammetry scans of lactose chip function of pH in 50 mM phosphate buffer with 50mM K ₃ [Fe(CN) ₆] and 0.1 M KCl at 100 mV/s scan rate.	74
Figure 3.3 (b)	Effect of pH on the current density of anodic and cathodic peaks of lactose chip in 50 mM phosphate buffer with 50mM K ₃ [Fe(CN) ₆], 0.1 M KCl and 0.5 mM lactose at 100 mV/s scan rate.	75
Figure 3.4	Calibration curve of cathodic current vs the different concentrations of lactose in 50 mM phosphate buffer, pH 7 with 50mM K ₃ [Fe(CN) ₆] and 0.1 M KCl at 100 mV/s scan rate.	76
Figure 3.5	Comparison of lactose chip for selectivity study using 1:1 concentration of substrates in 50 mM phosphate buffer, pH 7 with 50mM K ₃ [Fe(CN) ₆] and 0.1 M KCl at 100 mV/s scan rate.	76
Table 3.1.	Determination of lactose in milk samples using biosensor.	77

Equation 3.1.	Enzymatic reaction of -galactosidase	69
Equation 3.2.	Enzymatic reaction of galatose-oxidase	69
Equation 3.3.	Electrocatalytic breakdown of H ₂ O ₂	69
Chapter 4. Development, fabrication and characterization of DNA biosensor for the detection of <i>Mycobacterium tuberculosis</i>		
Figure 4.1	Formation of ester linkage between ssDNA probe 3' hydroxyl group and oxidized MWCNT	86
Figure 4.2	Cyclic voltametric scans of bare SPE and PupE chip (ssDNA-MWCNTs/PVA/GA) in 50 mM phosphate buffer, pH 8.0 with 50mM K ₃ [Fe(CN) ₆] and 0.5 M NaCl at 100 mV/s scan rate.	87
Figure 4.3	Cyclic voltammetric scans of PupE chip (ssDNA-MWCNTs/PVA/GA) in 50 mM phosphate buffer, pH 7 with 50mM K ₃ [Fe(CN) ₆] and 0.5 M NaCl at 100 mV/s scan rate.	88
Figure 4.4	Agarose gel showing PCR amplification of <i>PupE</i> gene.	89
Figure 4.5	Cyclic voltammetry scans of PupE chip in 50 mM phosphate buffer, pH 8.0 with 50mM K ₃ [Fe(CN) ₆] and 0.5 M NaCl after hybridization with various concentrations of target sequence of PupE gene in solution (1×10 ⁻⁴ to 1×10 ⁻¹⁸ M) after incubation in MB to find the limit of detection.	90
Figure 4.6 (a)	Cyclic voltammetry scans of PupE chip in 50 mM phosphate buffer, pH 8.0 with 50mM K ₃ [Fe(CN) ₆] and 0.5 M NaCl after hybridization with various concentration of target sequence of PupE gene in solution (1×10 ⁻⁸ to 1×10 ⁻¹⁶ M) after incubation in MB to find the linearity range.	90
Figure 4.6 (b)	Plot of different concentration of target ssDNA (1×10 ⁻⁸ to 1×10 ⁻¹⁶ M) vs. I (μA) cathodic peak current showing linearity in logarithmic distribution with (R ² =0.9723).	91
Figure 4.7	Cyclic voltammetry scans of PupE chip in 50 mM phosphate buffer, pH 8.0 with 50mM K ₃ [Fe(CN) ₆] and 0.5 M NaCl after	92

	hybridization with target complementary sequence of PupE gene (1×10^{-14} M) and non-complementary sequence (1×10^{-14} M) after incubation in MB to find the selectivity.	
Figure 4.8	Cyclic voltammetry scans of PupE chip before and after hot water treatment in 50 mM phosphate buffer, pH 8.0 with 50mM $K_3[Fe(CN)_6]$ and 0.5 M NaCl for regeneration.	93
Figure 4.9	Real sample analysis of <i>Mtb.</i> (PupE gene) using DNA chip	94
Chapter 5. Testing of Covid-19 real samples of Nsp3 gene of SARS-CoV-2 using DNA chip		
Figure 5.1	Testing of real positive samples of Covid-19 at 2 concentrations 1 fM and 10 fM.	98
Chapter 6. Testing of triglyceride real samples using conductive Nano-PEI-lipase based biosensor		
Figure 6.1	Real sample detection. Real samples coconut oil (a), groundnut oil (b) and sunflower oil (c) were used in the study at three different concentrations (n=3)	102
Table 6.1	Detection of real samples- TGA (Triglycerides)	104
Chapter 7. Electrochemical biosensor for breast cancer using DNA chip for cyclic voltammetric detection		
Figure 7.1	Formation of ester linkage between ssDNA probe 3' hydroxyl group (OH) and COOH-MWCNT (Jinal Thakkar's Thesis 2022)	111
Figure 7.2	Cyclic voltammetry scans of bare SPE and BRCA1 (ssDNA-MWCNTs/PVA/GA) in 50 mM phosphate buffer, pH 8.0 with 50mM $K_3[Fe(CN)_6]$ and 0.5 M NaCl at 100 mV/s scan rate.	112
Figure 7.3	Cyclic voltammetry scans of BRCA1 chip in 50 mM phosphate buffer, pH 8.0 with 50mM $K_3[Fe(CN)_6]$ and 0.5 M NaCl after hybridization with various concentrations of target sequence of BRCA1 gene in solution (1×10^{-4} to 1×10^{-14} M) after incubation in MB to find the limit of detection.	113

Figure 7.3 (a)	Cyclic voltammetry scans of BRCA1 chip in 50 mM phosphate buffer, pH 8.0 with 50mM $K_3[Fe(CN)_6]$ and 0.5 M NaCl after hybridization with various concentration of target sequence of BRCA1 gene in solution (1×10^{-8} to 1×10^{-12} M) after incubation in MB to find the linearity range.	113
Figure 7.3 (b)	Plot of different concentrations of target ssDNA (1×10^{-8} to 1×10^{-12} M) vs I (μA) cathodic peak current showing linearity in logarithmic distribution with ($R^2=0.9775$)	114
Chapter 8. Summary and conclusion		
Table 8.1	Summary of the research work done in the thesis	120
