Acknowledgements	iii
1 Introduction	1
1.1 Background and Origin of Study	1
1.2 Objectives and Organization of Thesis	3
2 Study of Single-Particle Dynamics in Liquid Metals	12
2.1 Introduction	12
2.2 Glass and Rice formulation of Modified Langevin Equation	16
2.3 Velocity autocorrelation function and Equation of Motion	18
2.4 Results	22
2.5 Discussion	38
2.6 Comment on Present approach and Reply	42
2.7 Conclusions	50
2.8 APPENDIX	51
2.8.1 Pair potential in Pseudopotential Formalism	51
2.8.2 Molecular Dynamics Simulation Details	52
3 Correlation between entropy and glass-forming ability of Cu-Zr and Cu-Zr-Al alloys	53
3.1 Introduction	53
3.2 Simulation details and Methods	54
3.3 Theoretical formulation and calculation	55
3.3.1 Excess Entropy	55

3.3.2	Mismatch and Configurational Entropy	57
3.4	Results and Discussion	58
3.5	Conclusion	62
4	Theoretical investigations on the glass-forming ability of Zr-based metallic glasses	65
4.1	Introduction	65
4.2	Theoretical Formulation	67
4.3	Results and Discussion	70
4.4	Conclusion	81
5	Experimental study of glass transition kinetics and the glass-forming ability of a fluorozirconate glass - ZBLAN	83
5.1	Introduction	83
5.2	Experimental Details	85
5.3	Results and Discussion	85
5.4	Conclusion	89
6	Conclusions and Future Scope	91
	References	95
