

A C K N O W L E D G E M E N T

It is with the deepest gratitude and profound respect that I wish to express my indebtedness to Dr. Sukh Dev, my guide, who introduced me to this topic of chemistry; and whose intuitive ideas and ever inspiring encouragement are mainly responsible for the work described in this Thesis. His inculcation of having a precise hypothesis and systematic execution will enable me to resolve any endeavour in future. I shall always cherish the memories of my personal association with him.

I have indeed enjoyed the fruitful discussions with Dr. Y.P.S. Chawla and Dr. S.N. Bannore, for which I am grateful to them.

It is my pleasing duty to sincerely thank Dr. O. Koul for his timely suggestions which helped maintain a steady pace of work. I was, in large part, a beneficiary of his expertise in entomology.

I am grateful to Dr. R.K. Bakshi and Dr. V.K. Singh (Dept of Chem., Harvard University, Cambridge, USA) for providing critical analytical data. Acknowledgements are due to Prof. (Miss.) N.J. Chinoy (Dept. of Zoology, Gujarat University, Ahmedabad) and Prof. V.V. Mody (Dept of Microbiology, M.S. University, Vadodara) for pharmacological and microbiological evaluations respectively.

I wish to thank the analytical staff, especially Mr. K.T. Neurganekar. I also wish to thank Mr. V.D. Joshi for bearing my impatience, Mr. C.C. Shah for extending all cooperation.

It is a pleasure to thank all MRC staff for their assistance during the tenure.

How can I forget my hostel colleagues who made my stay really enjoyable.

I would also like to thank the following institutions for the necessary technical assistance: Tata Institute of Fundamental Research, Bombay; National Chemical Laboratory, Pune; Indian Petrochemicals Corporation Limited, Vadodara.

The Multi-Chem Research Scholarship is gratefully acknowledged.
