

Contents

Chapter 1

<i>Introduction</i>	(1-48)
1.1 Introduction	1.
1.1.1 Catalysis	1.
1.1.2 Nanocatalysis	2.
1.2 Synthesis of nanoparticles	4.
1.2.1 Strategies for controlling the size and shape of nanoparticles	5.
1.2.2 Mesoporous materials and 2-D and 3-D nanocatalyst	6.
1.3 Characterization of nanocatalyst	7.
1.4 Unique properties of nanoparticles and catalysis	8.
1.4.1 High Surface area-to-volume ratio	8.
1.4.2 Effect of size of nanocatalysts	8.
1.4.3 Shape and morphology	9.
1.5 Advantages of nanoparticles as a catalyst	11.
1.6 Fundamental challenge for nanoparticle catalysis	11.
1.7 Nanocatalytic approaches: Role of stabilisers and ligands	11.
1.8 Magnetically recoverable nanocatalysts	12.
1.9 Applications of nanocatalysis	13.
1.9.1 Hydrogenation Reactions	13.
1.9.1.1 Magnetically recoverable nanocatalyst in hydrogenation	14.
1.9.1.2 Asymmetric hydrogenation	15.
1.9.2 Oxidation Reactions	17.
1.9.3 C–C coupling reactions	21.

1.9.3.1 Magnetic nanocatalysis for C-C coupling reaction	25.
1.9.4 Organocatalysis	26.
1.9.5 Nanocatalysts in Miscellaneous Reactions	29.
1.10 Environmental applications	31.
1.10.1 Photocatalysis	31.
1.10.2 Nanobiocatalyst	31.
1.10.3 Nanocatalysts for Clean Energy Applications	33.
1.11 Aim and outline	34.
1.12 References	37.

Chapter 2

Nickel Nano-catalysts: Synthesis, characterisation and catalytic application (49-57)

2.1 Introduction	49.
2.2 Objective and methodology of the present work	50.
2.3 Experimental section	51.
2.3.1 Synthesis of nickel nanoparticle (NiNPs)	51.
2.3.2 Characterizations methods	52.
2.4 Results and Discussion	52.
2.4.1 Characterization of nickel nanoparticles (NiNPs)	52.
2.5 References	56.

Chapter 2-Part 1

Catalytic application of Nickel Nanoparticles in Transesterification of primary esters (58-86)

2.1.1 Introduction	58.
---------------------------	-----

2.1.2	Experimental section	59.
2.1.2.1	Materials and Synthesis of metal nanoparticles	59.
2.1.2.2	Characterization methods	59.
2.1.2.3	General procedure for room temperature transesterification	59.
2.1.3	Results and Discussion	60.
2.1.3.1	Transesterification of diethylmalonate and other esters	60.
2.1.3.2	Transesterification with other alcohols	70.
2.1.4	Conclusion	72.
2.1.5	References	73.
	Spectral Data	77.

Chapter 2-Part 2

Catalytic application of Nickel Nanoparticles in transesterification of Aloe vera seed oil and other oils (87-122)

2.2.1	Introduction	87.
2.2.2	Experimental section	88.
2.2.2.1	Aloe Vera Seeds collection and oil extraction	88.
2.2.2.2	Transesterification reaction	89.
2.2.2.3	Characterizations methods	90.
2.2.3	Results and Discussion	91.
2.2.3.1	Properties, composition of AVSO	91.
2.2.3.2	Transesterification of triacetin	92.
2.2.3.3	Transesterification of seed oils	96.
2.2.3.4	Recycling of NiNPs	98.
2.2.3.5	Characterization of methyl esters of AVSO	99.
2.2.4	Conclusion	101.
2.2.5	References	102.
	Spectral Data	104.

Chapter 2-Part 3

Catalytic applications of Nickel Nanoparticles in electron transfer

<i>reactions</i>	(123-138)
2.3.1 Introduction	123.
2.3.2 Experimental	124.
2.3.2.1 Materials and methods	124.
2.3.2.2 Catalytic Reduction of <i>p</i> -Nitroaniline and other aromatic nitro compounds	124.
2.3.2.3 Decolourization of azo dye	125.
2.3.2.4 Redox reaction	125.
2.3.3 Results and discussion	126.
2.3.3.1 Catalytic Reduction of <i>p</i> -Nitroaniline and other aromatic nitro compounds	126.
2.3.3.2 Decolourization of azo dyes	130.
2.3.3.3 Redox reaction between potassium ferricyanide and sodium thiosulfate	134.
2.3.3.4 Recycling of NiNPs	135.
2.3.4 Conclusions	136.
2.3.5 References	137.

Chapter 3

Chapter 3-Part 1

Magnetically separable core/shell Iron oxide@Nickel nanoparticles: Catalytic application in chemoselective reduction of nitroaromatics

	(139-179)
3.1.1 Introduction	139.
3.1.2 Experimental	140.
3.1.2.1 Materials	140.
3.1.2.2 Synthesis of Iron oxide	140.
3.1.2.3 Synthesis of Iron oxide@Nickel Nanoparticles (IO@NiNPs)	141.

3.1.2.4 Catalytic reduction of p-Nitroaniline and other aromatic nitro compounds	142.
3.1.2.5 Characterizations methods	142.
3.1.3 Results and Discussions	144.
3.1.3.1 Synthesis and characterizations of Iron oxide (IO)	144.
3.1.3.2 Synthesis and characterizations of IO@NiNPs	147.
3.1.3.3 Catalytic reduction of p-Nitroaniline and other aromatic nitro compounds	152.
3.1.3.4 Recycling of IO@NiNPs	158.
3.1.4 Conclusion	162
3.1.5 References	163.
Spectral Data	166.

Chapter 3-Part 2

<i>Efficient catalytic reduction of azo dyes using magnetically separable core/shell Iron oxide@Nickel nanoparticles</i>	(180-202)
3.2.1 Introduction	180.
3.2.2 Experimental	181.
3.2.2.1 Materials	181.
3.2.2.2 Synthesis of Iron oxide@Nickel Nanoparticles (IO@NiNPs) with 10% loading of Nickel.	182.
3.2.2.3 Catalytic reduction of azo dyes	182.
3.2.2.4 Characterization methods	183.
3.2.2.5 LCMS Analysis	184.
3.2.3 Results and Discussions	184.
3.2.3.1 Synthesis and characterizations of IO@NiNPs	184.
3.2.3.2 Catalytic reduction of azo dyes	187.
3.2.3.3 Recycling of IO@NiNPs	193.
3.2.4 Conclusion	194.
3.2.5 References	195.

Spectral Data	198.
---------------	------

Chapter 4

Nanoparticle-supported and magnetically recoverable L-DOPA:

<i>Novel catalyst for the room temperature aldol reaction</i>	(203-230)
4.1 Introduction	203.
4.2 Experimental	204.
4.2.1 Materials	204.
4.2.2 Synthesis of magnetic nano-ferrites	204.
4.2.3 Surface modification of nano-ferrites	205.
4.2.4 Details of Experimental Procedure for Fe₃O₄-LD Catalysed Aldol reactions	205.
4.2.5 Characterization methods	206.
4.3 Results and Discussions	207.
4.3.1 Catalyst characterization	207.
4.3.2 Catalytic activity	214.
4.3.3 Mechanism investigation	218.
4.3.4 Recycling of nano-catalyst	219.
4.4 Conclusion	222.
4.5 References	223.
Spectral Data	226.

Chapter 5

Nanoparticle-supported and magnetically recoverable organic–inorganic

hybrid copper (II) nanocatalyst: a selective and sustainable

<i>oxidation protocol</i>	(231-267)
5.1 Introduction	231.
5.2 Experimental	233.
5.2.1 Materials	233.
5.2.2 Synthesis of magnetic nano-ferrites	233.

5.2.3 Surface modification of nano-ferrites	233.
5.2.4 Synthesis of nano- Fe ₃ O ₄ -L-DOPA-Copper complex (Fe ₃ O ₄ -LD-Cu)	233.
5.2.5 Details of Experimental Procedure for Fe ₃ O ₄ -LD-Cu Catalyzed Oxidation of Alcohol	234.
5.2.5.1 H ₂ O ₂ as oxidant	234.
5.2.5.2 Air oxygen as oxidant	234.
5.2.6 Characterizations methods	235.
5.3 Results and Discussions	236.
5.3.1 Catalyst characterization	236.
5.3.2 Catalytic activity	246.
5.3.3 Hot filtration test	255.
5.4 Conclusion	256.
5.5 Reference	257.
Spectral Data	261.
