

OUTLINE

Chapter-1 : Introduction	1-48
1.1. Introduction	1
1.2. Classification of dyes on the basis of their applications	3
1.3. Classification of dyes on the basis of Chromophore group	5
1.4. Dye Removal techniques	8
1.4.1. Biodegradation	9
1.4.2. Adsorption	9
1.4.2.1. Activated Carbon	9
1.4.2.2. Carbon nano tubes	10
1.4.2.3. Graphene	10
1.4.2.4. Low Cost adsorbents	11
1.4.2.5. Biopolymers	11
1.4.2.5.1. Chitosan	12
1.4.2.6. Layered Materials	12
1.4.2.6.1. Clay	12
1.4.2.6.2. Layered double Hydroxide	12
1.4.2.6.3. Zeolites	13
1.4.2.6.4. Zirconium Phosphate	13
1.4.2.7. Nano particles	13
1.4.2.8. Metal Organic Frame works	14
1.4.2.9. Composites	17
1.4.2.10. Bionano Composites	17
1.4.3. Reduction Process	19
1.4.4. Advanced Oxidation Process	19
1.4.4.1. AOP without irradiation	19
1.4.4.2. Fenton	20
1.4.4.2. AOP with irradiation	21
1.4.4.2.1. Photocatalysis	21
1.4.4.2.2. Ag Nanoparticles	22
1.4.4.2.3. Immobilisation of catalysts	24
1.4.4.2.4. Iron Oxide nanoparticles	26
1.4.4.2.5. Sonication	27
1.5. Objectives	31
Chapter-2 : Chapter Biogenic synthesis and catalytic performance of Nanosilver and Nanosilver biocomposites	49-98
2.1. Introduction - Palm Shell extract capped silver nanoparticles- SERS detection and Catalytic Degradation of Dyes	49

2.1.1.	Materials and methods	51
2.1.2.	Synthesis of palm shell extract and silver nanoparticles	52
2.1.3.	Characterisation of the synthesised materials	52
2.1.4.	Dye degradation experiments	52
2.1.5.	Catalytic reduction of p-nitrophenol	53
2.2.	Results and discussions	53
2.2.1.	Zeta potential analysis	53
2.2.2.	UV-Vis Absorption Spectroscopy	53
2.2.3.	Morphology of Nanosilver, Chitosan-silver and Chitosan-Guargum/ silver nanocomposite	54
2.2.4.	FT-IR spectroscopy	55
2.2.5.	X-Ray diffraction studies	57
2.2.6.	Raman spectroscopy studies	57
2.2.7.	Degradation studies of individual and binary mixture of dyes	60
2.2.8.	Total organic content	62
2.2.9.	Catalytic reduction of p-nitrophenol	62
2.2.10.	Conclusion	63
2.3.	Introduction- Guargum Stabilized Silver nanoparticles - SERS substrate for dye detection and as catalyst for degradation of cationic and anionic dyes	64
2.3.1.	Materials and methods	65
2.3.2.	Synthesis of Guargum stabilized silver nanoparticles	68
2.4.	Results and discussions	65
2.4.1.	Zeta potential analysis	65
2.4.2.	UV-Vis Absorption Spectroscopy	65
2.4.3.	Morphology of Guargum stabilized nanosilver	66
2.4.4.	FT-IR spectroscopy	67
2.4.5.	X-Ray diffraction studies	68
2.4.6.	Raman spectroscopy studies	69
2.4.7.	Mechanism for the formation of Silver nanoparticles	72
2.4.8.	Degradation studies of individual and binary mixture of dyes	72
2.4.9.	Total organic content	74
2.4.10.	Catalytic reduction of p-nitrophenol	74
2.4.11.	Conclusion	75
2.5.	Introduction- Biosynthesis of Palm shell reduced Silver-Chitosan composite and Chitosan- Guargum-silver composite for its environmental applications	76
2.5.1.	Materials and methods	77
2.5.2.	Synthesis of Silver-Chitosan nanocomposite (CAgPS)	77
2.5.3.	Synthesis of Chitosan-Guargum blend/Silver nanocomposite (CGAgPS)	78

2.6.	Results and discussions	78
2.6.1.	Zeta potential analysis	78
2.6.2.	Morphology of CAgPS and CGAgPS	78
2.6.3.	FT-IR spectroscopy	79
2.6.4.	X-Ray diffraction studies	81
2.6.5.	Raman spectroscopy studies	82
2.6.6.	Degradation studies of individual and binary mixture of dyes	85
2.6.7.	Total organic content	87
2.6.8.	Catalytic reduction of p-nitrophenol	88
2.6.9.	Discussion	89
2.6.10.	Conclusion	90

Chapter-3 : Synthesis, Characterization and catalytic applications of chitosan-ironoxide nanocomposite for degradation of Individual dyes and binary mixture of dyes

99-130

3.1.	Introduction	99
3.2.	Materials and Methods	103
3.2.1.	Synthesis of Palm shell extract, Ironoxide and Chitosan/ironoxide nanocomposite	103
3.2.2.	Individual and Binary dye degradation experiments	104
3.2.3.	Characterization of the synthesised materials	104
3.3.	Results and Discussion	105
3.3.1.	FTIR spectroscopy	105
3.3.2.	X-ray diffraction method	107
3.3.3.	Raman spectroscopy	108
3.3.4.	Transmission electron Microscopy	109
3.3.5.	Energy dispersive X-ray analysis	110
3.3.6.	Vibrating sample magnetometer analysis	110
3.3.7.	X-ray photoelectron spectroscopy	111
3.3.8.	Mossbauer spectroscopy analysis	117
3.3.9.	Degradation experiments	120
3.4.	Mechanism	123
3.5.	Reusability of catalyst	123
3.6.	Conclusions	123

Chapter-4 : Synthesis, Characterization and adsorption performance of Biocomposites of clay

131-244

4.1.	Introduction - Equilibrium, Kinetics and Thermodynamic study on Adsorption of individual dyes and binary mixture of dyes by Chitosan-Organically modified Nanoclay (Cloisite 30B) nano-bio composite	131
------	--	-----

4.1.1.	Materials and methods	133
4.1.2.	Synthesis of Chitosan-Organically modified Nanoclay (Cloisite 30B) nano-bio composite	134 134
4.1.3.	Characterisation techniques	134
4.1.4.	Preparation of dye solutions and batch sorption Experiments for single and binary mixture of dyes	134
4.1.5.	Equilibrium Sorption Studies	136
4.1.6.	Sorption Dynamics	141
4.1.7.	Thermodynamics of Sorption Studies	141
4.2.	Results and discussions	141
4.2.1.	FT-IR spectroscopy SEM and TEM Micrographs	141
4.2.2.	X-Ray diffraction studies	146
4.2.3.	Zeta potential analysis	148
4.2.4.	Thermogravimetric analysis	149
4.2.5.	Photophysical properties of Rhodamine-6G loaded adsorbents	149
4.2.6.	Dye adsorption studies of single component dye systems	151
4.2.7.	Dye adsorption studies of binary dye systems	167
4.2.8.	Conclusion	179
4.3	Introduction - Equilibrium, Kinetics and Thermodynamic study on Adsorption of individual dyes and binary mixture of dyes by Chitosan-hydrocalcite composite	180
4.3.1.	Materials and methods	181
4.3.2.	Synthesis of Chitosan-hydrocalcite composite	181
4.4.	Results and Discussions	181
4.4.1.	FT-IR spectroscopy	181
4.4.2.	SEM Micrographs	184
4.4.3.	X-Ray diffraction studies	185
4.4.4.	Zeta potential analysis	187
4.4.5.	Thermogravimetric analysis	187
4.4.6.	Dye adsorption studies of single component dye systems	188
4.4.7.	Dye adsorption studies of binary dye systems	201
4.4.8.	Conclusion	209
4.5.	Introduction - Adsorption property of Rhodamine 6G onto Chitosan-g-(N-Vinyl Pyrrolidone) / Montmorillonite composite.	210
4.5.1.	Materials and methods	213
4.5.2.	Synthesis of Chitosan-g-poly (vinyl 2-pyrrolidone)/montmorillonite hydrogel composites	213 213

4.6.	Results and discussions	213
4.6.1.	FT-IR spectroscopy	214
4.6.2.	SEM Micrographs	216
4.6.3.	X-Ray diffraction studies	217
4.6.4.	Thermogravimetric analysis	218
4.6.5.	DSC analysis	219
4.6.6.	Swelling studies	221
4.6.7.	Dye adsorption studies of single component dye systems	223
4.6.8.	Dye adsorption studies of binary dye systems	229
4.6.9.	Conclusion	234

Chapter-5 : Synthesis, Adsorption and Catalytic performance of nano Zirconium phosphate and its composite with Chitosan **245-285**

5.1.	Introduction	245
5.2.	Materials and Methods	247
5.2.1.	Synthesis of Adsorbent.	247
5.2.2.	Characterization techniques	247
5.2.3.	Preparation of dye solutions and batch sorption Experiments for single and binary mixture of dyes.	247
5.2.4.	Equilibrium Sorption Studies	248
5.2.5.	Sorption Dynamics.	248
5.2.6.	Thermodynamics of Sorption Studies	248
5.2.7.	Dye degradation experiments	248
5.3.	Results and Discussion	248
5.3.1.	FTIR spectroscopy	248
5.3.2.	Transmission electron Microscopy	251
5.3.3.	Energy dispersive X-ray analysis	252
5.3.4.	X-ray Diffraction studies	252
5.3.5.	Zeta potential analysis	254
5.3.6.	Thermogravimetric analysis	255
5.3.7.	Raman Spectroscopy analysis	256
5.3.8.	Dye adsorption studies of single component dye systems	257
5.3.9.	Dye adsorption studies of binary dye systems	271
5.3.10.	Degradation of single and binary mixture of dyes	279
5.3.11.	Total organic content	281
5.3.12.	Discussion	282
5.4.	Conclusion	282

Chapter-6 : Zirconium tungstate and it's bionanocomposite with Chitosan - a catalyst for degradation of Single and Binary mixture of dyes	288-302
6.1. Introduction	286
6.2. Materials and methods	288
6.2.1. Synthesis of Zirconium tungstate and Chitosan/Zirconium tungstate nanocomposite	288
6.2.2. Individual and Binary dye degradation experiments	288
6.2.3. Characterisation of the Zirconium tungstate and Chitosan – Zirconium tungstate materials	289
6.3. Results and discussions	289
6.3.1. FTIR spectroscopy	289
6.3.2. UV spectroscopy	290
6.3.3. Morphology analysis (TEM and EDX)	290
6.3.4. X-Ray diffraction analysis	291
6.3.5. Thermogravimetric analysis	292
6.3.6. DSC analysis	293
6.3.7. Raman spectrometric analysis	294
6.3.8. Degradation experiments	295
6.3.9. TOC analysis	298
6.3.10. Proposed Mechanism involved in the degradation process	299
6.4. Conclusions	299
Chapter-7 : Conclusion & Scope of Future Work	303-306
Chapter-8 : Summary	307-308
