Chapter 1

Introduction

1.1	Supramolecular Chemistry	1
1.2	Crystal Engineering: Crystals as Supramolecules	3
1.2.1	Supramolecular Synthesis	4
1.2.2	Hydrogen bond	6
1.3	Gel	10
1.3.1	Classification of LMOGs based on structural constituent	11
1.3.1.1	Fatty acid and aliphatic long chain based gelators	11
1.3.1.2	Amino acid /peptide based gelators	12
1.3.1.3	Bile acid/Steroid based gelators	13
1.3.1.4	Two component gelators	14
1.3.1.5	Metallogel	16
1.3.2	Characterization of supramolecular gels	18
1.3.2.1	¹ HNMR spectroscopy	18
1.3.2.2	X-Ray techniques	21
1.3.2.2.1	Powder X-Ray diffraction analysis	21
1.3.2.2.2	Single crystal XRD analysis	23
1.3.2.3	FT-IR spectroscopic studies	23
1.3.2.4	Rheology	25
1.3.2.5	Scanning electron microscopy	26
1.4	Applications of LMOGs	28
1.4.1	Supramolecular gels as templates for the synthesis of inorganic Nanostructures	28
1.4.2	Phase selective gelation for oil spill recovery	30
1.4.3	Organogel as a Template for the synthesis of porous polymer	32
1.4.4	Stimuli responsive organogel	34
1.4.5	Low molecular mass organogelator based gel electrolyte	37
1.4.6	LMOGs as reaction media /catalytic systems	38
1.4.7	Hydrogels in medicinal applications	40

1.4.8	Gels in conservation of Art	42
1.5	Aim and outline	45
1.6	References	48

Chapter- 2

Two -component supramolecular gelator based on melaminium salts: A step towards plausible mechanism of hydrogelation

2.1	Introduction	57
2.2	Experimental section	59
2.2.1	Materials and physical measurements	59
2.2.1.1	Materials	59
2.2.1.2	SEM measurement	59
2.2.1.3	FT-IR measurement	60
2.2.1.4	Powder X-ray diffraction study	60
2.2.1.5	Single Crystal X-ray study	60
2.2.1.6	UV-Vis spectroscopy study of Nanoparticles	60
2.2.1.7	TEM Studies	60
2.2.1.8	Gelation Test	61
2.2.1.9	T _{gel} measurements	61
2.2.2	Synthesis	61
2.2.2.1	Synthesis of organic salts	61
2.2.2.2	Synthesis of silver nanoparticles	62
2.2.3	Analytical data	62
2.3	Results and discussion	63
2.3.1	Gelation studies	63
2.3.2	SEM characterization	65
2.3.3	X-ray diffraction studies	65
2.3.4	Synthesis and characterization of silver nano-particles	69
2.4	Conclusions	72
2.5	References	73

Chapter- 3

Combinatorial library approach to realize 2-Aminothiazole based two-component Hydrogelator: A Structure–Property Correlation

3.1	Introduction	75
3.2	Experimental section	80
3.2.1	Materials and physical measurements	80
3.2.1.1	Materials	80
3.2.1.2	SEM measurement	80
3.2.1.3	FT-IR measurement	80
3.2.1.4	Powder X-ray diffraction study	80
3.2.1.5	Single Crystal X-ray study	80
3.2.2	Synthesis	81
3.2.3	Analytical data	81
3.3	Results and discussion	84
3.3.1	Gelation studies	85
3.3.2	Single Crystal X-ray Studies	87
3.3.3	Powder X-ray Diffraction study	98
3.4	Conclusions	101
3.5	References	102

Chapter- 4-Part(A)

Probing the role of weaker interactions in immobilization of solvents in a novel class of Thiazole based supramolecular gelator

4.1	Introduction	104
4.2	Experimental section	105
4.2.1	Materials and physical measurements	105
4.2.1.1	Materials	105
4.2.1.2	FT-IR spectroscopy	105
4.2.1.3	¹ HNMR Experiments	105
4.2.1.4	Scanning Electron Microscopic Study	105

4.2.1.5	Powder X-ray Diffraction Study	105
4.2.1.5	Single Crystal X-ray studies	105
4.2.1.6	Gelation Test	106
4.2.1.7	T _{gel} Measurement	106
4.2.2	General Synthesis methodology	106
4.2.3	Analytical data	107
4.3	Results and discussion	108
4.4	Conclusions	123
4.5	References	124

Chapter- 4-Part(B)

Odd–even effect in a thiazole based organogelator: understanding the interplay of non-covalent interactions on property and applications

4.6	Introduction	126
4.7	Experimental section	128
4.7.1	Materials and physical measurements	128
4.7.2	General Synthesis methodology	129
4.7.3	Gelation Test	130
4.7.4	Synthesis of Silver nanoparticle	130
4.7.5	Synthesis of ZnO nanoparticle	130
4.7.6	Antibacterial activity	130
4.7.7	Analytical data	131
4.8	Results and discussion	134
4.8.1	Gelation behaviour	134
4.8.2	Morphological studies of xerogel	140
4.8.3	Single crystal X-ray studies	142
4.8.4	Template directed synthesis of Ag and ZnO nanoparticles	146
4.8.5	Studies of silver nanoparticles embedded in gel network	151
4.9	Conclusions	153
4.10	References	154

Chapter- 5

Room temperature metallogelation for a simple series of aminothiazole ligands with potential applications in identifying and scavenging mercury ions

5.1	Introduction	156
5.2	Experimental section	157
5.2.1	Materials	157
5.2.2	Instrumentation	157
5.2.2.1	FT-IR Spectroscopy	157
5.2.2.2	¹ HNMR Spectroscopy	157
5.2.2.3	Scanning Electron Microscopic Study	157
5.2.2.4	UV-visible Spectroscopy	157
5.2.2.5	Atomic absorption Spectroscopy	157
5.2.2.6	Rheological measurement	157
5.2.3	Procedure	158
5.2.3.1	In situ Gel Formation	158
5.2.3.2	Gelation selectivity experiment	159
5.2.3.3	Sample preparation for AAS analysis	159
5.2.3.4	Sample preparation for job's plot	159
5.3	Results and discussion	159
5.4	Conclusions	171
5.5	References	172

Chapter- 6

Structure property correlation of supramolecular assemblies organized by Thiazole based amides

6.1	Introduction	173
6.2	Experimental Section	177
6.2.1	Materials and physical measurements	177
6.2.1.1	Materials	177

6.2.1.2	FT-IR spectroscopy	177
6.2.1.3	¹ HNMR spectroscopy	177
6.2.1.4	Scanning Electron Microscopic Study	177
6.2.1.5	Single Crystal X-ray studies	177
6.2.1.6	Gelation Test	178
6.2.1.7	T _{gel} Measurement	178
6.2.2	Synthetic procedure	178
6.2.3	Analytical data	179
6.3	Results and discussion	181
6.3.1	Gel Formation and Characterization	181
6.3.2	Single-Crystal Structures	184
6.4	Conclusions	191
6.5	References	192
